Curbdrain: Load Class A-C: Concrete & Landscape

NOTES:

1. It is necessary to ensure the minimum dimensions shown are suitable for the existing ground conditions. *Engineering advice may be required.*
2. A minimum concrete strength of 3000 PSI is recommended. The concrete should be vibrated to eliminate air pockets.
3. The finished level of the concrete must be approx. 1/8" above the top of the Curbdrain inlet.
4. Refer to ACO'S latest installation instructions for complete details.

Curbdrain: Load Class A-C: Concrete & Landscape

General

The surface drainage system shall be ACO Infrastructure CurbDrain as manufactured by ACO, Inc. or equal approved.

Materials

The curb drainage system bodies shall be manufactured from polyester polymer concrete with minimum properties as follows:

Compressive strength: 14,000 psi

Flexural strength: 4,000 psi

Water absorption 0.07%

Frost proof

Salt proof - B117 Salt Spray Test compliant

Dilute acid and alkali resistant

The nominal clear opening shall be 3.95" (100mm) with overall width of 6.3" (160mm). Pre-cast units shall be manufactured with neutral invert and have a minimum wall thickness of at least 0.67" (16mm). Each unit will feature a full radius in the trench bottom and a male to female interconnecting end profile. A sealant groove provides a 1/4" recess to allow a bead of sealant to be inserted at joints if required. Units shall have cast in anchoring features on the outside wall to ensure maximum mechanical bond to the surrounding bedding material and pavement surface. Each standard unit shall provide 2 front inlets each providing 8.71 sq. ins. open area.

Installation

The surface drain system shall be installed in accordance with the manufacturer's installation instructions and drawings.
