

ACO INFRASTRUCTURE

Vollrath Distribution Center Sheboygan, WI

PROJECT PORTFOLIO

Product:

HighwayDrain HD200

Consistent growth for Vollrath high quality foodservice products initiated expansion plans at this Sheboygan facility. A new 140,000-square-foot distribution center would consolidate inventory in one location and ensure the same level of service that their customers expect could be provided. Expansion plans also required the construction of additional loading docks.

Originally a cast-in-place system was specified but after reviewing ACO HighwayDrain HD200 and the time and cost savings that could be achieved, the contractor decided to switch. The monolithic trench drain system offers excellent hydraulic and loading performance and the single piece unit is easy to install ensuring site cost and time savings.
